Description

Elements of Probability

A slip of paper is given to person A, who marks it with either a dollar or an asterisk sign; the probability of writing a dollar sign is $\frac{2}{3}$. A passes the slip to B who may either do nothing or change the sign before passing it to C. Next, C passes the slip to D after perhaps changing the sign. Finally, D passes it to a referee after perhaps changing the sign. It is known that B, C, and D each change the sign with probability $\frac{1}{3}$. What is the probability that A originally wrote a dollar sign given that the referee sees the same sign on the slip?

Tips for writing posts:

- Read the prompt and instructions carefully.
- Identify the most important words or phrases in the prompt to help you stay on point.
- Ensure your post is free from plagiarism. When alluding to an idea or text/image that is not your own, add a citation that identifies the full name of the source, the date it was published, and any other citation element.
- Ensure your post is free from plagiarism. When alluding to an idea or text/image that is not your own, add a citation that identifies the full name of the source, the date it was published, and any other citation element.
- Use a formal writing style.
- Double-check your post to ensure there are no spelling mistakes and grammatical issues.

Tips for responding to peer responses:

Responding to other participants is optional and does not affect your grades. However, responding to your peers' posts is recommended and encouraged.

While responding to your peers' posts

- Provide constructive comments.
- Provide reasons for your agreement or disagreement.

For constructing your arguments, we recommend that you use steelmanning, which implies that you find the best argument to test an opposing opinion. We do not recommend that you use strawman arguments. A strawman is a fallacious argument that distorts an opposing stance to make it easier to attack.
